SUMMARY

BSc (Hons) Information Technology undergraduate at SLIIT, specialising in Artificial Intelligence, with a strong interest in AI, Machine Learning, and Full Stack Development. Currently building academic and personal projects using Python, Java, Spring Boot, React, and machine learning technologies. Interested in applying technical knowledge to real-world software solutions while continuing to grow through hands-on experience and continuous learning.

PROJECT EXPERIENCE

Automated Football Blogging Platform **Personal Project | 2026**

- Built a modern automated football news platform using MERN stack and workflow automation.
- Integrated NewsAPI to collect latest football headlines from multiple global sources.
- Automated daily content generation and publishing using N8N workflows.
- Connected Google Gemini API to generate AI-based blog content and chatbot responses.

Plant Disease Detection Web Application **Academic Group Project | 2025**

- Developed an AI-powered web application to detect plant diseases from leaf images using a CNN model.
- Built backend services using Python and Flask for image processing and prediction handling.
- Trained and tested the model using the PlantVillage dataset for accurate disease classification.
